viflow crashes when the user clicks on any list item (KB10161)

Sebastian Eich - 2018-08-06 - 0 Comments - in Anwendung / Application

If you click on a list object within viflow, e. g. when creating a new database (ViFlow 4.5 and 5 only) or in the process properties window (all versions), viflow is terminated immediately.

Under certain circumstances, an error concerning the files Mscomctl. ocx or Comctl32. ocx can also be displayed.

Solution:

The Problem can be resolved by installing the [Common Controls for Microsoft Visual Basic 6.0](#).

Always install the English version of this file, even if your operating system is a different language version.
